

Quantum-Thinking--Reaching

Quantum-Thinking is an expanded way of perceiving experiential reality as a result of continuous consciousness exploration. The more one explores via metaphysical experiences (those beyond the five senses and their instrumental extensions) –such as creativity, intuition, higher-order thinking conceptual ideas, imagination, and the Hubble Space Telescope—the more one thinks in an expanded, holistic way. This repetitive process of personal growth is the essence of inclusion; particularly, from a leadership perspective. It is the ability to “take in” more experiential reality and *integrate*, not necessarily replace, what one already knows as metacognition. You know what you know without the necessity of explanation. It is one with who you are. (Period the end—my daughters)

The reaches of your consciousness exploration are not so much self-limitations as they are sensible self-pacing. Some individuals prefer to stroll, some fast walk, and others like to run. The value of such exploration is to balance one’s acquisition of external competencies, such as information technology and life management, with inner competencies such as information processing, and knowledge and wisdom acquisition. In fact, the “opportunity” is to combine the two types of competencies as inseparably one.

For example, any program or technical device has built into it the wisdom of its builder reflected in its usage for the benefit or detriment of humankind and the environment. (Einstein and Oppenheimer) Our typical preoccupation is with copywriting (as if information and knowledge can be owned!) from possible theft and the simultaneous imprint of survival into the consciousness of the program or device, which is the dominant nature of humans on this planet! And then we ask, “Can technology develop a consciousness of survival and competition with respect to humans?” Of course, we have programmed it into it! (LOL) (The latter discussion is for observation, not judgement) Reminds me of the quote of **Long Chen Pa** in my 1985 book, **Realizations**.

*“Since everything in life is but an experience perfect in being what it is,
having nothing to do with good or bad, acceptance or rejection,
one may well burst out in laughter.”*

The point of this conversation is to illustrate the multidimensional nature of wisdom and consciousness exploration, far beyond, two (either “me and/or you”), three, or even four dimensions. That is why quantum-thinking is a ***responsibility*** for anyone in an influential role regardless of title, education, or station in life, which is the essence of leadership.
